

MOW LESS ENJOY SUMMER MORE

There are plenty of better ways to spend time this year than with your mower. So cut your mowings in half over the coming high growth period.

Primo MAXX® slows the growth.

As a result, your turf is denser and healthier. The lawn is greener. And you are free to spend more of your time on other things. That's giving yourself a real Summer break.

Call today to arrange for an application of Primo MAXX.

Growing success

What is Primo MAXX? It's a "growth regulator," which means your lawn won't grow so quickly.

What does it do? It forces the grass to grow thicker instead of taller. The lateral stems become fuller as the colour of the lawn becomes a richer shade of green. Your lawn will not only be lush and attractive, it will have what it needs to stay that way.

* **Promotes deeper, stronger roots**

Instead of using energy on growth, it uses it on creating healthier roots.

* **Retains moisture in the turf**

The grass makes the most of the water it receives, whether rain or irrigation.

* **Helps turf tolerate shade**

Shady areas naturally grow thin; now even those areas can have thick turf.

* **Enhances other turf products**

Stronger, denser turf resists disease better and helps suppress weeds.

Give us a call if you have any further questions about how
Primo MAXX applications can help improve your lawn.

Primo MAXX® Registered trademark of a Syngenta Group Company.
Primo MAXX contains Trinexapac-Ethyl. ALWAYS READ THE LABEL, USE PESTICIDES SAFELY.
